

IQS Announces Interactive Web-based Product Training

Web-based training provides a flexible learning environment to complement IQS' on-site training programs.

March 26, 2009

IQS, the leading provider of Enterprise Risk and Quality Management Software, announces the expansion of their traditional on-site training program to include flexible, Web-based training. Using web-based training tools, the IQS training students will interact with the instructor, and have skills verified online.

"Our new Web-based training classes are offered in 4-hour (or less) sessions that will be live and interactive during the scheduled training session, and afterwards available in on-demand replay mode," said Renee Bregar, IQS Customer Service Manager. "For those clients who desire specific training in one or two areas, are occasional users, or can't attend the initial training session, the new modular training is an optimal choice.

Upcoming Web-based training courses include:

- Navigation; Customer, Employee and Supplier Management
- Product
- Equipment/Device
- Data Collection and SPC
- Skip-lot
- Nonconformance and Corrective Action Management
- System Administration and Security
- Document
- Training
- Advanced Planning
- Audit
- QCost

"Our customers have told us that they need training without travel. IQS' new Web-based training program not only serves that need, but makes simple and focused training available for those users that only interact with a small portion of the system." said Brad Dedrick, Vice President of Services at IQS. "Our web-based training gives clients the experience and the support of our expert instructors, who average 27 years of industry experience, without leaving their desks."

The first class is scheduled for July 13, which gives IQS users plenty of time to register online. To learn more about IQS' Web-based or on-site training programs, contact Renee Bregar, IQS Customer Service Manager at 440-333-1344, or visit the IQS website at www.iqs.com/Customers_Training/197.htm.

About IQS

IQS – Integrated Quality Systems, helps companies reduce costs and risk by improving quality throughout their enterprise and supply chain. Since its inception in 1988, IQS has been the choice of leading automotive, aerospace, chemical and process, discreet, medical device and recently high-profile manufactures such as those in the pet food industry. IQS reduces risk through a bottom-up verifiable approach to manufacturing. With countless case studies and bottom-line ROI testimonials, IQS

is the industry leader in enterprise risk and quality management software. For more information, please visit www.IQS.com.
